

*Several derricks were built at the temple site to assist in placing the temple wall stones on the building.*

*Eventually four large derricks were used at the temple site to swing the stones into place after the workers had hooked the stones onto winch lines.*

*A steam engine was brought to the temple site to power a derrick sometime in 1876, and following the completion of the Logan Temple in 1884, a second engine was brought to Salt Lake and used to lift stones at the temple site.*
